EXECUTIVE SUMMARY	ES-1
1. INTRODUCTION	1-1
1.1 Purpose	1-1
1.2 Scope of the Analysis	1-1
1.3 Organization of the TSD	1-3
References	1-5
2. OVERVIEW OF SCRAP METAL OPERATIONS	2-1
2.1 Characteristics of Scrap Sources	2-1
2.2 Industry Perspectives	2-3
2.3 Principal Scrap Metal Operations Considered	2-4
2.4 Current Recycle Practice for Nuclear Facilities	2-6
References	2-8
3. SCREENING PROCEDURES TO DEFINE THE SCOPE OF THE ANALYSIS	3-1
3.1 Primary Purpose of the TSD	3-2
3.2 Primary Screening Criteria	3-4
3.3 Sources of Scrap Metal Considered - Administrative and Functional Categories	3-5
3.3.1 Administrative Authorities	3-5
3.3.2 Functional Categories	3-10

CONTENTS (Continued)

3.4	Types of Scrap Metal Considered	3-12
3.4.1	Screening Based on Economic Value	3-12
3.4.2	Screening Based on Public Health Considerations	3-13
3.5	Radionuclides Selected for Consideration	3-15
3.6	Scenarios, Pathways, and Biological Endpoints Considered	3-15
3.7	Summary of the Screening Process and Associated Limitations	3-19
3.7.1	Sources of Scrap Metal	3-19
3.7.2	Types of Scrap Metal from Nuclear Facilities	3-20
3.7.3	Radionuclides	3-21
3.7.4	Scenarios, Pathways, Modeling Assumptions, and Biological Endpoints	3-22
	References	3-23
4.	QUANTITIES AND CHARACTERISTICS OF POTENTIAL SOURCES OF SCRAP METAL FROM DOE FACILITIES AND COMMERCIAL NUCLEAR POWER PLANTS	4-1
4.1	Existing and Future Scrap Metal Quantities Available From DOE	4-1
4.1.1	Background Information	4-1
4.1.2	Existing Scrap Inventories at DOE	4-9
4.1.3	Summary of Existing Scrap Inventories at DOE Sites	4-14
4.1.4	Scrap Metal Inventory by Metal Type	4-15
4.1.5	Future Scrap Metal Quantities at DOE	4-17
4.1.6	Summary and Conclusions	4-21
4.2	Potential Sources and Characteristics of Scrap Metal from the Commercial Nuclear Power Industry	4-23
4.2.1	Summary Estimates of Contaminated Steel for Reference BWR/ PWR and the Commercial Nuclear Industry	4-24

CONTENTS (Continued)

4.2.2	Contaminated Metal Inventories Other Than Steel	4-25
4.2.3	Time-Table for the Availability of Scrap Metal from the Decommissioning of Nuclear Power Plants	4-26
	References	4-29
5.	DESCRIPTION OF UNRESTRICTED RECYCLING OPERATIONS	5-1
5.1	Introduction	5-1
5.1.1	Recycling Scrap Steel - An Overview	5-1
5.1.2	Reference Facility	5-3
5.1.3	Exposure Pathways	5-4
5.2	List of Operations and Exposure Scenarios	5-5
5.2.1	Dilution Factors	5-6
5.2.2	Scrap Processing Operations	5-8
5.2.3	Steel Mill	5-8
5.2.4	Use of Steel Mill Products	5-11
	References	5-13
6.	CALCULATION OF RADIOLOGICAL IMPACTS	6-1
6.1	Radioactive Contaminants	6-1
6.2	Specific Activities of Various Materials	6-5
6.3	Exposure Pathways	6-8
6.3.1	External Exposures to Direct Penetrating Radiation	6-8
6.3.2	Inhalation of Contaminated Dust	6-12
6.3.3	Incidental Ingestion	6-14
6.3.4	Radioactive Decay	6-16
6.4	Unique Scenarios	6-17
6.4.1	Ground Water Contaminated by Leachate from Slag Storage Piles . .	6-18
6.4.2	Ingestion of Food Prepared in Contaminated Cookware	6-32

CONTENTS (Continued)

6.4.3	Impact of Fugitive Airborne Emissions from the Furnace on Nearby Residents	6-32
6.4.4	Potential Doses to Individuals Following Disposal of Recycled Metal	6-33
	References	6-34
7.	RESULTS AND DISCUSSION OF RADIOLOGICAL IMPACTS ON INDIVIDUALS	7-1
7.1	Normalized Doses and Risks to the RMEI	7-1
7.2	Maximum Exposure Scenarios	7-2
7.2.1	Slag Pile Worker	7-5
7.2.2	Cutting Scrap	7-5
7.2.3	Lathe Operator	7-5
7.2.4	EAF Furnace Operator	7-6
7.3	Evaluation of the Results of the Radiological Assessment	7-6
7.3.1	Dilution of Potentially Contaminated Steel Scrap	7-6
7.3.2	Exposure Pathways	7-7
7.3.3	Mass Distribution and Partitioning of Contaminants	7-10
7.3.4	Scenario Selection	7-10
7.4	References	7-11
8.	DETECTION AND MEASUREMENT OF SCRAP CONTAMINATION	8-1
8.1	Statement of Purpose	8-1
8.2	Guidelines and Standards for Free Release of Scrap Established by the NRC and DOE	8-1
8.2.1	NRC: Regulatory Guide 1.86 (1974 and 1982)	8-2
8.2.2	DOE Order 5400.5	8-4
8.2.3	Release Criteria for Volumetric Contaminants	8-4

CONTENTS (Continued)

8.3	Verification of Residual Contamination on Materials Released for Unrestricted Use	8-5
8.3.1	Total Alpha and Beta-Gamma Direct Measurements	8-6
8.3.2	Surface Scanning for Total Alpha and Total Beta Contamination	8-7
8.3.3	Surveys for Total Gamma Contamination	8-7
8.4	Lower Limit of Detection and Minimum Detectable Concentration	8-8
8.4.1	MDCs for Surface Scanning for Small Areas of Contamination	8-9
8.4.2	MDC for Surface Scanning for Large Areas of Contamination	8-10
8.4.3	MDC for Direct Measurements	8-11
8.5	Radionuclide MDCs for Surface Contamination	8-11
8.6	The Potential Impact of Introducing Radioactively Contaminated Metal in the Production of Steel	8-27
8.7	Limitations of Standard Survey Measurements When Scrap Is Contaminated Volumetrically	8-28
8.7.1	Limitations When Bulk Contaminant is a Beta Emitter	8-28
8.7.2	Limitations When Bulk Contaminant is an Alpha Emitter	8-30
8.7.3	Limitations for Gamma Emitting Bulk Contaminants	8-31
8.8	Assessing the Radionuclide Concentration in Steel Produced from Scrap ..	8-31
8.9	MDCs and Associated Parameters for Laboratory Analysis of Radionuclides	8-32
8.10	Summary	8-39
	References	8-39
9.	NORMALIZED COLLECTIVE IMPACTS MODELS	9-1
9.1	Transportation	9-3
9.2	Airborne Emissions	9-6

CONTENTS (Continued)

9.3	Slag	9-9
9.3.1	Road-Building	9-10
9.3.2	Fill	9-14
9.3.3	Railroad Ballast	9-18
9.3.4	Other Purposes	9-18
9.3.5	Slag Normalized Collective Doses	9-19
9.4	Baghouse Dust	9-20
9.4.1	Zinc Recovery	9-20
9.4.2	Disposal in Landfill	9-20
9.5	Finished Steel	9-21
9.5.1	Automotive	9-22
9.5.2	Kitchen Appliances	9-24
9.5.3	Office Buildings	9-26
9.5.4	Cookware	9-28
9.5.5	Finished Steel Normalized Collective Doses	9-30
9.6	Total Normalized Collective Doses and Risks	9-31
	References	9-35
10.	EVALUATION OF UNCERTAINTIES PERTAINING TO SCRAP METAL QUANTITIES, ESTIMATES OF DOSE AND RISK, AND MINIMUM DETECTABLE CONCENTRATIONS	10-1
10.1	Introduction	10-1
10.2	Uncertainties in Scrap Metal Source Quantities and Levels of Contamination	10-5
10.2.1	Scrap Metal from Nuclear Power Plants	10-5
10.2.2	Scrap Metal from DOE Facilities	10-9
10.3	Uncertainty for Normalized RMEI Doses and Risks	10-13

CONTENTS (Continued)

10.4	Uncertainty in Normalized Collective Dose Estimates	10-17
10.5	Uncertainties Regarding Minimal Detectable Concentrations for Radionuclide Contaminants	10-23
	References	10-29

APPENDICES

- APPENDIX A: Characterization of Scrap Metal Inventories at U.S. Nuclear Power Plants
- APPENDIX B: Recycling of Aluminum Scrap
- APPENDIX C: Recycling of Copper Scrap
- APPENDIX D: Selection of Radionuclides for Radiological Impacts Assessment
- APPENDIX E: Distribution of Radionuclides During Melting of Carbon Steel
- APPENDIX F: Distribution of Radionuclides During Melting of Cast Iron
- APPENDIX G: Dilution of Scrap Metal from Nuclear Facilities in Scrap Metal From Other Sources
- APPENDIX H: Detailed Description of Exposure Scenarios (not yet available)
- APPENDIX I: Leaching of Radionuclides From Slag
- APPENDIX J: Normalized Doses and Risks to Individuals - By Scenario
- APPENDIX K: Individual Doses and Risks
- APPENDIX L: Uncertainties in Evaluations to Date

LIST OF TABLES

3-1	Inventory of Sites That Are Known to be Contaminated with Radioactivity	3-7
3-2	Estimates of Existing and Projected Potential Sources of DOE Scrap Metal Used for Screening Purposes (from MIN 96)	3-8
3-3	Functional Categories for Nuclear Facilities and Sites Containing or Contaminated with Radioactive Materials	3-11
3-4	Potential Economic Value of Types of Scrap Metal	3-13
4-1	Groupings in DOE Materials in Inventory	4-10
4-2	Existing Contaminated Scrap Inventories at DOE Sites	4-11
4-3	Summary Estimates of Existing DOE Scrap Metal Inventories (Metric Tonnes)	4-15
4-4	MIN Scrap Metal Inventory by Metal Type (Metric Tonnes)	4-16
4-5	Estimated Scrap Inventories by Metal Type Currently Stored at DOE Facilities (Metric Tonnes)	4-17
4-6	Summary Data for Existing and Future Contaminated Scrap at DOE Facilities	4-22
4-7	Summary Data for Contaminated Steel Inventories Potentially Suitable for Recycling	4-24
4-8	Summary of Contaminated Metal Quantities Other Than Steel (Metric Tonnes)	4-26
4-9	Time-Table for Available Contaminated Scrap Metals from Decommissioned Nuclear Power Plants Quantities (Metric Tonnes)	4-27
5-1	Operations and Exposure Parameters for Radiological Assessments of Individuals ...	5-7
6-1	Implicit Progenies of Nuclides Selected for Analysis	6-3
6-2	Nuclides Included in Various Combinations and Decay Series	6-5
6-3	Partition Ratios (PR) and Concentration Factors (CF)	6-7

LIST OF TABLES (Continued)

6-4	Lung Clearance Class and F ₁ Values for Use with FGR 11	6-15
6-5	Potential Contaminants of Ground Water	6-20
6-6	Composition of Slag Used in Leaching Test	6-23
6-7	Leaching Parameters Values	6-24
6-8	Diffusion Coefficients for EAF Slag Monolithic Samples	6-25
6-9	Fractions of Various Toxic Elements Leached from Slags Using EPA TCLP Protocol	6-27
7-1	Maximum Exposure Scenarios and Normalized Impacts on the RMEI From One Year of Exposure	7-3
8-1	Regulatory Guide 1.86 Acceptable Surface Contamination Levels	8-3
8-2	Detectability of Radionuclides (Small Area) by Surface Scan Relative to RG 1.86 Limits	8-15
8-3	Detectability of Radionuclides (Large Area) by Surface Scan Relative to RG 1.86 Limits	8-17
8-4	Detectability of Radionuclides by Direct Count Relative to RG 1.86 Limits	8-19
8-5	Detectability of Radionuclides (Small Area) by Surface Scan Relative to DCLs	8-21
8-6	Detectability of Radionuclides (Large Area) by Surface Scan Relative to DCLs	8-23
8-7	Detectability of Radionuclides by Direct Count Relative to DCLs	8-25
8-8	Laboratory MDCs, Associated Parameters, and Costs	8-35
8-9	Detectability of Radionuclides by Laboratory Analysis Relative to DCLs	8-37
9-1	Major Transportation Pathway Assumptions	9-4
9-2	Unweighted Transportation Doses (person-rem per Ci-transported)	9-5

LIST OF TABLES (Continued)

9-3	Unweighted Airborne Emission Doses (person-rem per Ci-released)	9-7
9-4	Slag Pathway Normalized Collective Doses (person-rem per Ci-in pathway)	9-12
9-5	Typical Landfill Values Assumed	9-16
9-6	Landfill Normalized Collective Doses (person-rem per Ci-disposed)	9-16
9-7	Annual Steel Slag Sales (thousand metric tonnes)	9-19
9-8	Primary Assumptions Used in the Automobile Model	9-22
9-9	Automobile Doses (person-rem per Ci-in car)	9-23
9-10	Kitchen Model Major Assumptions	9-24
9-11	Finished Steel: Kitchen (Seven Appliances) Doses (person-rem per Ci-in appliance)	9-25
9-12	Finished Steel: Office Building Doses (person-rem per Ci-in office)	9-28
9-13	Finished Steel: Frying Pan Doses (person-rem per Ci-in pan)	9-29
9-14	Distribution of Finished Steel in Commercial Products	9-30
9-15	Total Normalized Collective Dose and Risks (per Ci-in scrap)	9-33
10-1	Selection of Data Sources for Scrap Metal Quantities at DOE Facilities	10-10
10-2	Uncertainty/Variability in Normalized Individual Doses	10-15
10-3	Relative Range in MDCs	10-28

LIST OF FIGURES

4-1	The U.S. Nuclear Weapons Complex	4-2
5-1	Operations Analyzed	5-2
9-1	Potential Collective Exposure Scenarios	9-1
9-2	Collective Impact Calculational Approach	9-2
9-3	Simplified Flow Diagram of the MEPAS Methodology	9-15
9-4	Office Module General Layout and Construction Details	9-27
10-1	Comparison of a Deterministic Model and a Probabilistic Model (from Little 1983)	10-3
10-2	Bounding Normalized RMEI Dose Values (mrem/y per pCi/g)	10-16
10-3	Collective Impact Calculational Approach	10-18
10-4	Effects of Ambient Background on MDC Calculation	10-28
